Dear Patrick

Ref: RGB Electrical Services & Supplies Inc: Carnival Splendor Fire Project 2010

We would like to sincerely thank RGB and their team of more than 100 electricians and engineers for the exemplary work carried out during the repair of the Carnival Splendor in 2010/2011.

As we know following a catastrophic aft engine room fire, the entire area was devastated destroying associated cables including the Medium voltage and Low voltage switchboards located directly above.

A lengthy 3 month repair and replacement project started in San Diego and continued in San Francisco dry dock, which was a huge undertaking and undoubtedly the worst engines room fire suffered by carnival Cruise Lines

Several contractors were involved in the repair including the original ship builder, however RGB were by far the largest electrical contractor onboard.

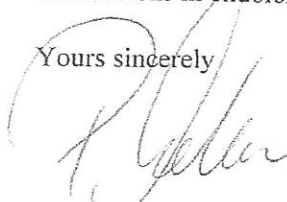

Without your assistance the project could not have been completed in such a small time frame and we appreciated the professional approach and excellent quality of workmanship.

RGB completed:

- Installation of approx.60km of MV/LV Power/control/Fiber cable and associated racking.
- Approx. 90 Power/control/fiber approved cable splices installed.
- Termination, testing and commissioning of multiple ER systems.

I look forward to working with RGB Electrical Services & Supplies, Inc in the future and have no reservations in endorsing your company to others.

Yours sincerely

Peter Fetten
